Williams Hematology, 9E

Synopsis

The world's most highly regarded reference text on the mechanisms and clinical management of blood diseases. A Doody's Core Title for 2017! Edition after edition, Williams Hematology has guided generations of clinicians, biomedical researchers, and trainees in many disciplines through the origins, pathophysiological mechanisms, and management of benign and malignant disorders of blood cells and coagulation proteins. It is acknowledged worldwide as the leading hematology resource, with editors who are internationally regarded for their research and clinical achievements and authors who are luminaries in their fields. The Ninth Edition of Williams Hematology is extensively revised to reflect the latest advancements in basic science, translational pathophysiology, and clinical practice. In addition to completely new chapters, it features a full-color presentation that includes 700 photographs, 300 of which are new to this edition, and 475 illustrations. Recognizing that blood and marrow cell morphology is at the heart of diagnostic hematology, informative color images of the relevant disease topics are conveniently integrated into each chapter, allowing easy access to illustrations of cell morphology important to diagnosis. Comprehensive in its depth and breath, this go-to textbook begins with the evaluation of the patient and progresses to the molecular and cellular underpinnings of normal and pathological hematology. Subsequent sections present disorders of the erythrocyte, granulocytes and monocytes, lymphocytes and plasma cells, malignant myeloid and lymphoid diseases, hemostasis and thrombosis, and transfusion medicine.

Book Information

Series: Williams Hematology

Hardcover: 2528 pages

Publisher: McGraw-Hill Education / Medical; 9 edition (December 23, 2015)

Language: English

ISBN-10: 0071833005

ISBN-13: 978-0071833004

Product Dimensions: 8.7 x 2.9 x 11.1 inches

Shipping Weight: 10 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 3 customer reviews

Kenneth Kaushansky, MD (Stony Brook, NY) is Senior Vice President, Health Sciences and Dean of the School of Medicine, Stony Brook University. Marshall A. Lichtman, MD (Rochester, NY) is Professor of Medicine and of Biochemistry and Biophysics, University of Rochester Medical Center. Josef T. Prchal, MD (Salt Lake City, UT, and Prague, Czech Republic) is Professor of Medicine, Pathology, and Genetics, Hematology Division of the University of Utah, and Department of Pathophysiology, First Faculty of Medicine, Charles University in Prague. Marcel M. Levi, MD, PhD (Amsterdam, The Netherlands) is Chairman of the Department of Medicine at the Academic Medical Center, University of Amsterdam. Oliver W. Press, MD, PhD (Seattle, WA) is Member and Penny E. Petersen Endowed Chair of Lymphoma Research, Fred Hutchinson Cancer Research Center, Professor of Medicine at the University of Washington. Linda J. Burns, MD (Minneapolis, MN) is Vice President and Medical Director, Health Services Research at National Marrow Donor Program/Be The Match.

The best textbook in hematology.

Been reading this to prepare for research in a heme-onc lab as a grad student. The text covers everything relevant to clinical science and treatment of specific conditions, as well as an intro to basic hematology principles and patient management. Especially with this new edition, all the science and treatment recommendations are up-to-date, with specific detail provided about recent advances such as cancer vaccines and immunotherapy. The way it's written balances information with digestibility; if i had to use this to study for boards, it would be neither too detailed nor too lax. Would highly recommend to heme-oncs as a reference, PhDs working in heme-onc, fellows, and physicians in other specialty requiring some heme knowledge.

Great book ,I love to read it. Must have for a better understanding in hematology.
