Antepartum, intrapartum, postpartum, newborn, and women's health chapters are not grouped in way the reader will understand it better. These modules are all over the place and you have to jump from different pages to another to collect information from each module. Many of of my classmates, almost half, are not doing good and are failing. Average score per exam is 70%. Highest is 88%. Terrible.

I am taking this class right now (2017) in the summer "quarter" and I like that the website listed in the inside cover allows access to student resources and doesn't require a code. They offer key points to the chapters and NCLEX type of question for each chapter.

You can do better without this study guide. Usually, in nursing school, the exams are given in a scenario mode and this book is just to know the terms and fill in the blanks. Who needs that for nursing school?

good

Great!

This book is good for those of us who don't like to read but still want to understand what the whole chapter is about. I would recommend it as a good source to study with after skimming the chapters.

Just want to thank the seller for leaving such a sweet, simple note along with the book I purchased. Thank you so much for that note and the book.

Originally rented this book and then later purchased it because I fell in love with maternity and this book covers so much material. Great textbook to learn everything needed.
